After you've created your world, you can use the spell launcher to create spells. Spells are made from 3 components, and the speed that they can be made and cast is limited. So while it is possible to create infinite number of spells, the number of spells available will always be limited. Legislative Package a Deep Cut to Management The State Legislature rolled out its tax reform package yesterday, but the biggest impact may be on management. Since the 1980s, Illinois has increased employee contributions to pensions, deferred compensation, and health insurance, creating a huge unfunded liability. Governor Pat Quinn proposed one big solution: raise the retirement age from 60 to 65. The state estimates it will save \$4.4 billion in retirement benefits over the next two years. But it also estimates that will only pay for half of the deficit. The rest would come from cuts in health care benefits, a reduction in the state's Medicaid program, and cuts in state aid to schools and local governments. The total impact is estimated at more than \$14 billion. The Senate and the House have to pass the bill before it goes to Quinn for his signature. If they can agree on something, the package is likely to be overwhelmingly approved by both chambers in this year's session. Otherwise, it's a year of hard bargaining with the executive branch.

Q: How to insert array in table column in mysql I am trying to insert a data in mysql table from php. I get the form data and put into variable \$name=\$\_POST["name"]; \$value=\$\_POST["value"]; Now I want to insert the form data in mysql database table with their column name and values. I have created the table with columns: id name value And the form: 82157476af
